Lincoln Land Community College

Employee Wireless Access Configuration for Apple iOS

Lincoln Land Community College (LLCC) provides free wireless Internet access as a convenience to students, employees and guests throughout the majority of our locations. The LLCC wireless network is currently undergoing an extensive upgrade to improve coverage and to increase security.

The upgraded LLCC wireless network is being deployed in stages and will initially be available only in a few areas. Maps indicating where the new wireless service can be found are located online at its.llcc.edu/wireless and at the ITS Helpdesk in Menard Hall. The following documentation will provide instruction for connecting to the new LLCC wireless network.

These instructions apply to devices that meet the following criteria:

- A device running Apple iOS 4.3 or greater

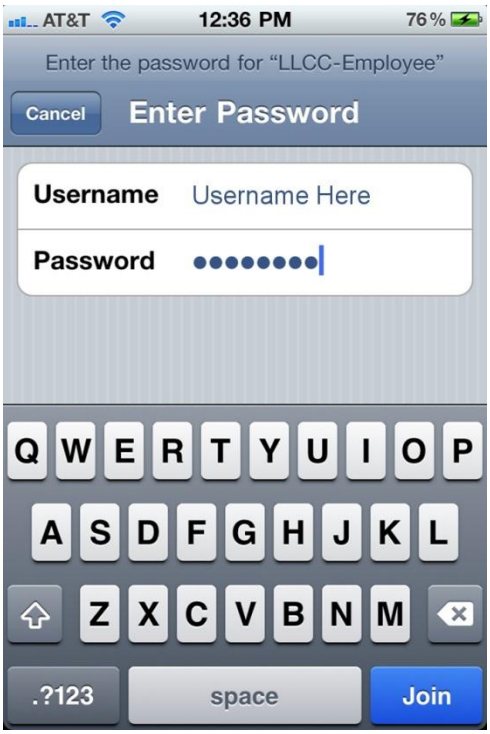
Because the digital security of our users is important to LLCC, we require that all (Student/Employee) wireless connections be encrypted. As a result, there are a few configuration settings that will need to be made. The instructions for this process are as follows:

1.) On the home screen, select on the 'Settings' icon.

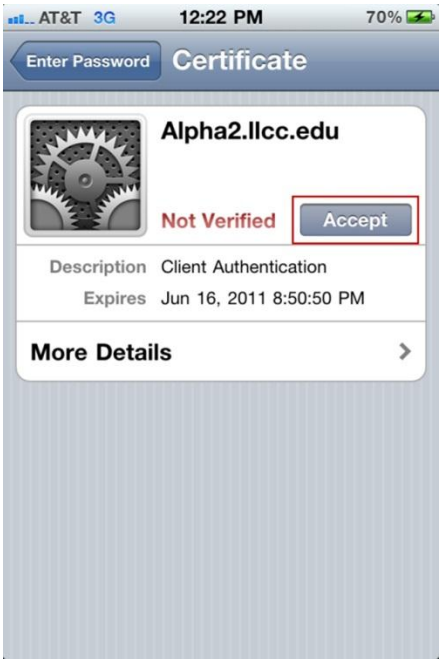
2.) From the *Settings* screen select 'Wi-Fi'.

3.) In the list of available wireless networks, please select **LLCC-Employee**.

4.) When prompted enter your 'Username' and 'Password' (LLCC User ID and password) and press 'Join' (the blue button)



5.) Press 'Accept" to verify the certificate from the server.



6.) You should now be connected to the **LLCC-Employee** wireless network. (Checkmark next to **LLCC-Employee**)

Please contact the ITS Helpdesk for assistance with wireless network connectivity.
