Lincoln Land Community College

Student Wireless Access Configuration for Android 3.x 'Honeycomb'

Lincoln Land Community College (LLCC) provides free wireless Internet access as a convenience to students, employees and guests throughout the majority of our locations. The LLCC wireless network is currently undergoing an extensive upgrade to improve coverage and to increase security.

The upgraded LLCC wireless network is being deployed in stages and will initially be available only in a few areas. Maps indicating where the new wireless service can be found are located online at its.llcc.edu/wireless and at the ITS Helpdesk in Menard Hall. The following documentation will provide instruction for connecting to the new LLCC wireless network.

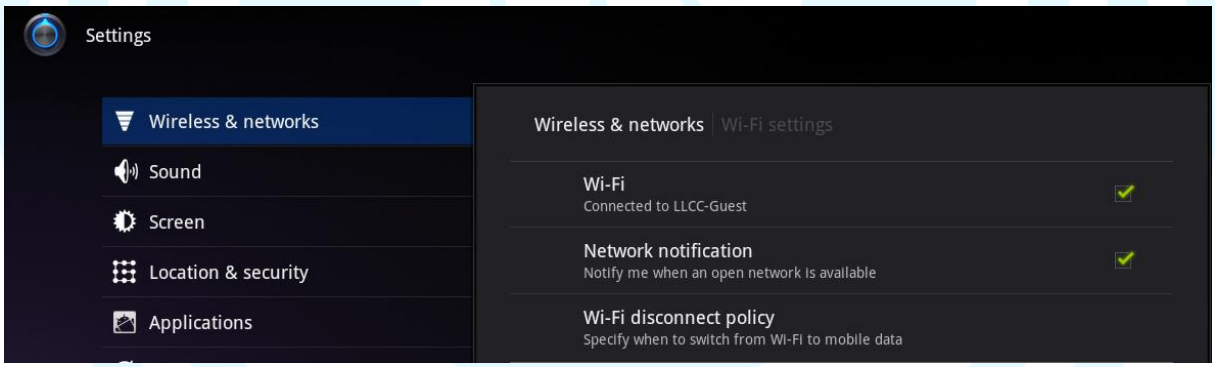
These instructions apply to devices that meet the following criteria:

- A device running Android 3.x 'Honeycomb' or greater

Because the digital security of our users is important to LLCC, we require that all Student wireless connections be encrypted. As a result, there are a few configuration settings that will need to be made. The instructions for this process are as follows:

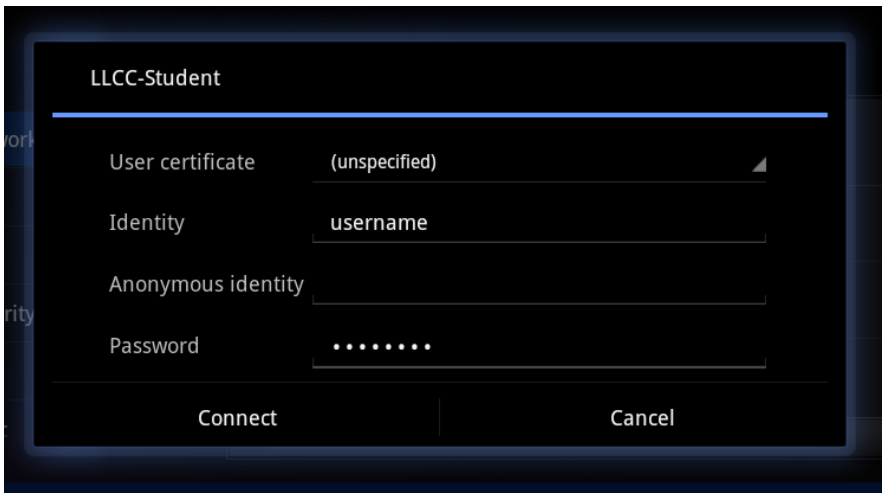
1.) From the Home screen, press the 'Apps button then find and press the 'Settings' icon.

2.) Select 'Wireless & networks'. Make sure that Wi-Fi is enabled with a green check.

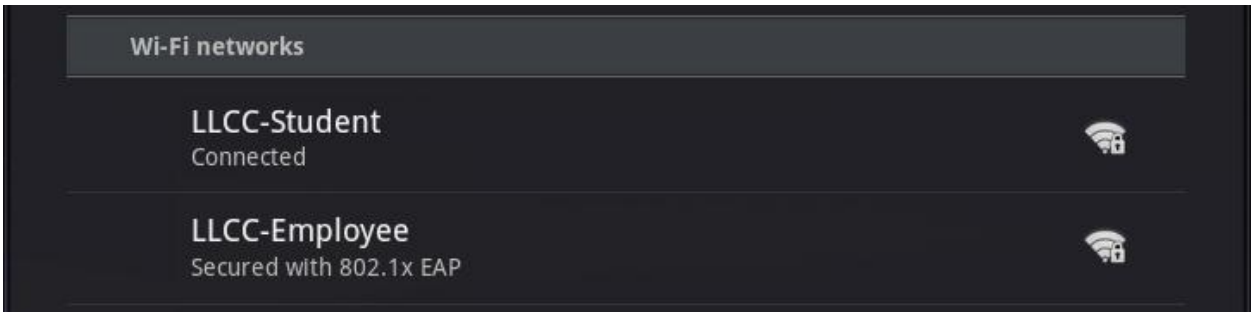


3.) Select **LLCC-Student** and enter your LLCC User ID in the 'Identity' field. (Make sure your screen matches.)

4.) Enter your LLCC password in the 'Password' field. The 'Anonymous identity' field should be left blank. Press 'Connect' to complete the connection.



5.) The device should now be connected to the LLCC-Student wireless network.



Please contact the ITS Helpdesk for assistance with wireless network connectivity.
