Lincoln Land Community College

Student Wireless Access Configuration for Mac OS X

Lincoln Land Community College (LLCC) provides free wireless Internet access as a convenience to students, employees and guests throughout the majority of our locations. The LLCC wireless network is currently undergoing an extensive upgrade to improve coverage and to increase security.

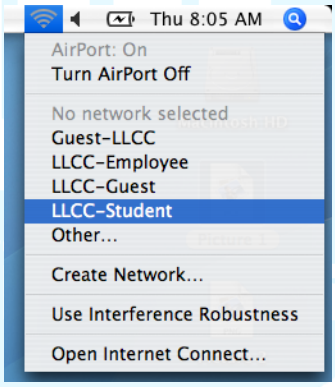
The upgraded LLCC wireless network is being deployed in stages and will initially be available only in a few areas. Maps indicating where the new wireless service can be found are located online at its.llcc.edu/wireless and at the ITS Helpdesk in Menard Hall. The following documentation will provide instruction for connecting to the new LLCC wireless network.

These instructions apply to devices that meet the following criteria:

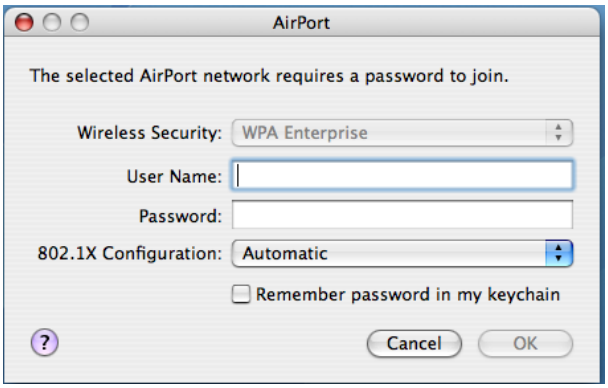
- Mac OS 10.3.x (Panther) or higher
- A wireless network adapter that supports 802.11b, 802.11g or 802.11n

Because the digital security of our users is important to LLCC, we require that all Student wireless connections be encrypted. As a result, there are a few configuration settings that will need to be made. The instructions for this process are as follows:

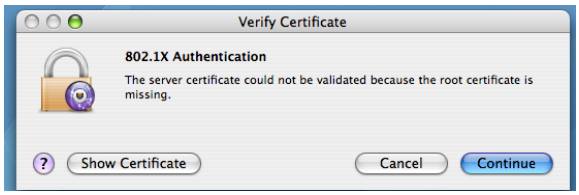
1.) In the top right corner you should see your available wireless network connections. If not please make sure that your wireless is enabled on your device.



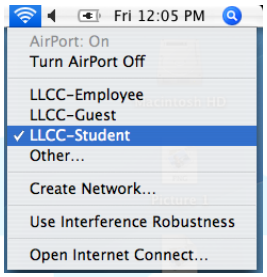
2.) Select **'LLCC-Student'** and click to accept. When prompted with a box from *AirPort* asking for a User Name and Password: Please enter your LLCC User ID and password in the appropriate fields and then click 'OK'.



3.) When the *Verify Certificate* dialog is displayed, click on "Continue" to complete the connection to the LLCC-Student wireless network.



4.) Once authenticated, the device should be connected to the network. (LLCC-Student has a checkmark next to it)



Please contact the ITS Helpdesk for assistance with wireless network connectivity.
