Class Description:

The purpose of this hands-on two session seminar is to help people understand potential computer security issues and to give advice and steps that can be taken to protect your computers, mobile devices, information, identity, etc. The following topics will be discussed in detail:

There will also be a question and answer session, so bring your questions.

- Malware (viruses, trojan horses, worms, etc.)
- Email
- Passwords
- Internet Browsing (anonymous browsing, incognito mode, downloads, cookies, etc.)
- Encryption (network, passwords, storage, etc.)
- Digital Certificates
- Mobile Devices
- Identity Theft
- Facebook
- Deleting Files Securely
- Firewalls
- Backups
- Wi-Fi/Wireless Security

Who should attend:

This seminar is useful for the computer novice all the way up to expert.

About the Presenter

Darrell Fortae began learning how to program computers when he was 11 years old. His father hired a professional to give him private lessons because of his interest level. Before reaching college, he had already hosted his own BBS (Bulletin Board System), created games and learned how to do computer functions easily.

Fortae has been working in software development for a total of 25 years (15 being professional). He also has a passion to teach. Because of his practical years of experience, as well as having a bachelor's degree in computer science, he provides multiple perspectives while teaching.

He has worked for various computer consulting firms doing a wide variety of software development (Java, .NET, C++, etc.), as well as system/software architecture roles. He also has worked in several state agencies as a consultant.

Fortae is the owner of Everlast Software, LLC, which offers a wide variety of software and services, including a strong focus on document management/imaging. More information can be found at www.everlastsoftware.com or at the imaging website www.esimaging.com.
